Susan,

Since the bid waiver has been signed, can you have a check-in with Midac (requesting an update on the quote and new timeline) in anticipation of getting the instruments in Feb. 2005? We should make an offical requst for leasing the instruments before November 9, 2004. Will you be able to complete the method evaluation/validation by then?

Thanks,
Shixia

Shixia:
We've finally received approval for the bid waiver for the Midac equipment rental. Denise is working on getting the purchase order entered into the system. Our working assumption is that we will not need the equipment before February 1 of 2005 and that we will require no more than a three month lease (for the months of February, March and April 2005).

Since the vendor requires a 90 day lead time, this means that they must begin manufacturing the equipment no later than November 9, 2004 (this allows them 12 weeks).

Since we will have the PO in place in the next week or so, I wanted to suggest that you (and maybe Susan) have a check-in with the vendor to apprise them of our current plans and timing needs (since it is different than what we may have last outlined for them).

Please let me know if any questions.
